ICED 2020 proceedings:
Evaluating the use of a collaborative content curation tool to support online assessments

Abstract

The University of the South Pacific (USP) is one of three regional education institutions in the world. The History Department which is based in Fiji represents one of the few disciplines at USP which delivers its undergraduate programme fully online. Together with the Centre for Flexible Learning (CFL), the History staff have been evaluating the effectiveness of online teaching and experimenting with technologies and tools to overcome teaching and learning challenges. This paper discusses an experimental mobile app which was created by third year History students at USP in 2018 to document local historical sites in the Suva area. It considers the challenges and opportunities created by online learning in the uniquely regional environment of the South Pacific. It further explores how technology can enable more practical and relevant applications and assessments of History content curation to better prepare students for future careers.

1 Introduction

The History Department in the School of Social Sciences is in a unique position as one of the few disciplines at the University of the South Pacific (USP) to offer a full undergraduate programme online. Together with the Centre for Flexible Learning (CFL), the History staff have been evaluating the effectiveness of online teaching and experimenting with technologies to overcome teaching and learning challenges. Student and stakeholder feedback highlighted the need for more practical and relevant applications of History content curation and assessments. Limited research on local histories in Fiji has been produced to date (Derrick 1950; Lai 1992) and the teaching of History in Fiji is limited by a lack of up-to-date open educational resources (OERs). Locally relevant historical information would benefit the community by providing educational resources for local schools, encouraging history tourism for foreign visitors (particularly those from the regular cruise ships), and generating interest and enthusiasm amongst the local community.

One of the key emerging issues in higher education is how to foster interactive and authentic learning in an online environment. This is particularly challenging for Pacific Island countries which are characterised by significant diversity and often lack access to specific contextualised resources. As the capacity and utilisation of the Internet evolves phenomenally over time, eLearning strategies also need to keep pace. How can we use new technologies to improve student learning experiences, while at the same time cater both culturally and technologically to a diverse student population?

One of the challenges that students in online courses face is navigating and discerning information on the World Wide Web. This has been expressed by some as an “information overload” problem, but perhaps this explanation is too simplistic. As Seitzinger (2014, 412) notes, connected individuals are not experiencing an information overload problem, “but rather a filter failure, our lack of having a process for operating in this new environment.” Search engines have become increasingly sophisticated and institutions (like USP) have been training students on how to effectively use these tools. However, it is unclear if this training is sufficiently addressing the issue. The solution may lie in a more collaborative approach to technology. It should not be the sole responsibility of the teacher to filter content for students; rather, students need to be actively engaged in the process of filtering content for themselves. Content curation is one way that this goal could be achieved, and evidence suggests that content curation could improve student learning as well as help to create contextualised resources for Pacific Island countries in the future.

Content curation is the process of aggregating, validating, and annotating existing content with its associated intellectual property claims into a comprehensive repository (Rotman et al 2012, 1093). It is essentially a process of strategic collection and presentation. One of the main advantages of curating digital content is that different mediums can be utilised to present information, such as blogs, podcasts, videos, webinars, social media posts and infographics. Curating of content is a useful tool because it gives students the opportunity to edit and filter information according to their own learning abilities and interests and it allows curators to control the quality of information presented about a topic. Content curation can be done manually by individuals, or with the aid of automated software. Social media platforms such as Pinterest, Flickr and other free to use software such as Scoop.it, Learnist, Pearltrees, Storify, Delicious, or BagTheWeb can help collect and share curated content. Numerous studies have highlighted the benefits of content curation for student learning and engagement (Deschaine and Sharma 2015; Flintoff, Mellow and Clark 2014; Zhong et al. 2013; Lambert and Frisch 2013; Minocha and Petre 2012). However, the changing nature of technology has meant that many studies of content curation quickly become obsolete or outdated.

2 Research questions

The purpose of this project was to evaluate the use of a collaborative content curation tool to support online assessments. The outcome was the development of an OER mobile history app which collated, curated and communicated local knowledge about key historical sites in Fiji.

1. What is the impact of the collaborative content curation tool on student learning and engagement in an online environment?

2. How can these technologies effectively facilitate collaborative eLearning to enhance student learning?

3. What alternative strategies or technologies can be employed to make History teaching online more interactive and contextualised?

---

3 The Fijian History app can be freely download from the Google Play Store and Apple App Store. A website was also created (https://fijianhistory.com) to accommodate users without access to mobile devices.
3 **Methodology**

The development of the mobile app was embedded within a 300-level online History course in Semester 2, 2018 (titled HY304 Pacific History: Protest and Identity). 48 students (33 female, 15 male) participated in the research as part of their coursework assessments. Students were required to work in groups of five to compile historical data (primarily about locations within the Suva city limits) and populate the mobile app as part of a content curation assessment task. This data was presented in the form of written information (containing research about the history of each site), images (both historical and current), and audio (students wrote scripts and pre-recorded audio to be used in the mobile app). Students were asked to design, test and revise the mobile app before it was launched to the public on 19 October 2018. The research team utilised quantitative and qualitative analysis of data from four sources: Moodle Analytics; Google Analytics; feedback surveys (quantitative and qualitative); and individual qualitative interviews with ten students.

4 **Results & discussion**

4.1 **Student feedback survey results**

43 students completed an entry and an exit survey during the course. The average age of the cohort was 25, and 58% identified themselves as Fijian. The entry survey showed that the majority of the participants (77%) were competent with smartphone, tablet and/or computer technology. Being third-year students, most were confident in writing essays and using the learning management system (Moodle). Though most stated that they enjoyed reading (which is a major skill required in History courses), the course results suggest that reading skills were poor. Surprisingly, the majority of students (58%) preferred face-to-face courses over online or blended modes.

The majority of students (93%) enjoyed the project, most frequently citing the opportunity for practical fieldwork as one of the reasons. Though students did not specifically identify the app, they frequently referred to the benefit of interactions, which could be considered a consequence of the app project design. 85% agreed that the project was more relevant than other assessments. In qualitative interviews, some students explained the importance of research skills and local content for their aspiring roles as high school teachers.

Most (73%) preferred this project to an essay assignment because it was more relevant and engaging. They agreed that the design of the project was appropriate for an online course because it made learning easier, more flexible and more exciting. This confirms the value of the mobile app project for enhancing student learning. Interestingly, during interviews students noted that in addition to the mobile app, the use of Moodle, social media and face-to-face meetings was necessary for the project. This suggests that a single mode or use of technology is restrictive and ineffective in online learning. Rather, a combination of technologies should be made available to facilitate learning.

4.2 **Moodle Analytics**

The Moodle e-Learning platform was also used to analyse student participation and engagement in the online course. 81% of students registered on the HY304 Moodle page clicked on less than 50% of the course. This was a surprising statistic, considering that 48% of students in the first-year online History course clicked on less than 50% of the course. This suggests that as students gain confidence and familiarity with online History courses at USP, they learn to prioritise only the content which is assessable. It also signals that course coordinators and designers need to be more creative in finding ways to encourage student engagement in online learning.
The absence of plagiarism was a positive and unexpected side-effect of this project design. The content for the mobile app by groups was submitted via a text matching software (Turnitin) which guides teachers in determining plagiarised content. In this case, no plagiarism cases were detected. Students were discouraged from plagiarism because the content of research was not easily accessible online, and students were aware that their work would be published publicly. This is an improvement compared to previous course offerings, where students frequently exceeded 20% Turnitin similarity scores.

4.3 Google Analytics

Google Analytics has also been useful for determining initial engagement with the Android version of the app. As of July 2020, 9894 users have accessed the content. Of those users, 47.4% have accessed the content from their desktops and 52.6% have accessed it from a mobile or tablet. The two largest proportions of users are aged 25–34 (33.5%) and 18–24 (27.5%).

The most interesting data collected is the popularity of particular pages. The Momi Bay Historical Park is rated as the most popular site (8%), followed by pages which focus on indigenous Fijian sites (Origins of Suva, Tavuni Hill Fort, Great Council of Chiefs) (all approximately 5%). The popularity of the World War Two Gun Battery at Momi Bay, may be attributed to tourism, as it is a key tourist attraction for international visitors to Nadi. The popularity of indigenous locations on the mobile app may be due to the fact that users are unable to find information about these places elsewhere online. There remains greater scope for promoting this mobile app to visiting tourists, particularly those on cruise ships that dock at Suva Harbour. Offering guided walking tours in association with the app may be a useful addition to stimulate engagement and use. Much more can be done to expand the app beyond the confines of Suva, and to document in greater detail indigenous historic sites, such as villages and natural features. For the time being, each year a new class of History students is tasked with documenting new sites to add to the app.

5 Conclusions

Below are some tentative conclusions based on the study:

1. Mobile apps can demonstrate the applicability of theoretical knowledge to students, as well as the limits of technology as an intellectual tool.
2. Though the mobile app enhanced student learning by encouraging greater interaction, it should not be used in isolation, but rather in combination with institutional learning management systems (Moodle), social media and face-to-face discussions.
3. Public presentation of assignments can discourage plagiarism and increase student motivation.

Acknowledgements

We thank the Centre for Flexible Learning at the USP for supporting this research. We also thank Sanjeet Chand, Ariti Taufaga, and the students of HY304 who contributed their knowledge and experience to this project.
